

Keep EMS Vehicles Mission-Ready with Clear, Connected Insights.

EMSLink gives EMS fleets the essential diagnostics they need to reduce downtime, streamline troubleshooting, and keep vehicles ready for the next call. It delivers remote fault visibility and core vehicle data in a simple, focused way.

What EMSLink Delivers

Critical insights without the complexity:

- ✓ Remote fault visibility
- ✓ Basic chassis and engine signals
- ✓ Key alerts tied to ignition cycles
- ✓ Streamlined views for service and troubleshooting
- ✓ Seamless integration to DTD and Captium

All designed to keep apparatus operational, predictable, and ready to respond.

Key Benefits for EMS Fleets

See Problems Earlier

Remote fault visibility helps identify issues before they take a unit out of service.

Troubleshoot Faster

Clear, essential diagnostics give technicians the context they need to act quickly and confidently.

Reduce Downtime

Better information means faster decisions and fewer unexpected failures.

Stay Focused on the Call

EMSLink connects key vehicle data to Captium, turning signals into clear insight so fleets can spot issues earlier and service teams stay ready.

Simple to Adopt

With V-MUX powered by DTD, Captium installs fast, protects existing workflows, and gives teams shared fleet health for earlier detection and faster service readiness.

Benefits for Ambulance Dealers

Built-in Value for Customers

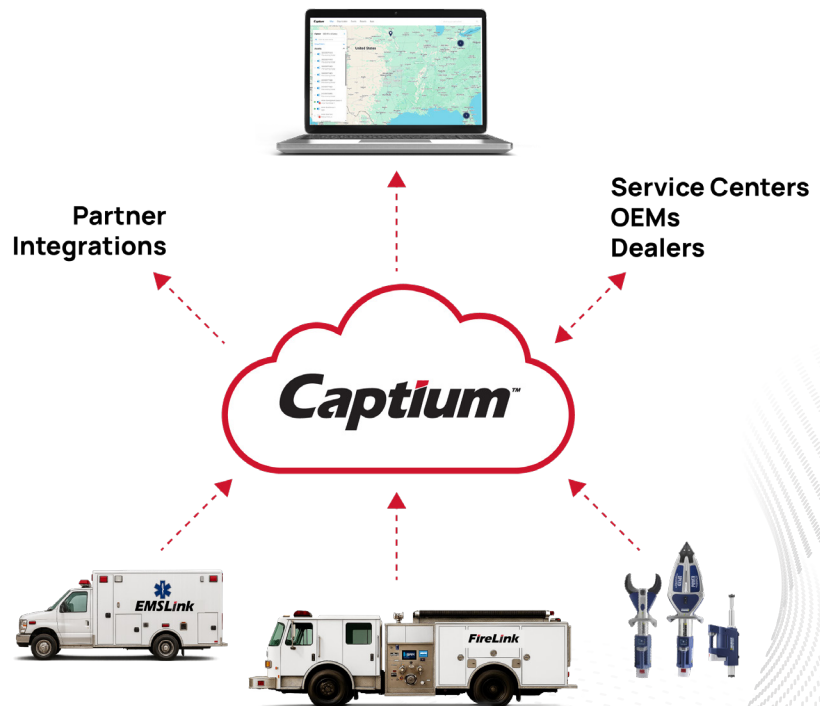

Deliver connected diagnostics as part of your electrical architecture without adding heavy cost or integration overhead.

Enhance Reliability and Serviceability

Support fleets with remote visibility to help resolve issues faster and reduce service burden.

Future-Ready Foundation

EMSLink connects to the broader Captium ecosystem, giving OEMs a scalable pathway to future insights and integrations.

The Captium Advantage

EMSLink is part of Captium—the connected platform that turns equipment and apparatus data into insights. By feeding vehicle data into Captium, EMSLink gives fleets and service teams a shared view of fleet health, helps catch issues early, and supports faster, better-prepared service.
