

See The True Condition Of Your Fleet, With Clear Connected Insights.

FireLink gives fire departments the essential apparatus diagnostics they need to reduce downtime, streamline maintenance, and keep the fleet ready for every shift. It connects apparatus systems to Captium, delivering real-time visibility and health insights in a simple, focused way.

What FireLink Delivers

Critical insights without the complexity:

- ✓ Pump-related data (intake & discharge pressures) for operational planning
- ✓ Apparatus health and system diagnostics in one view
- ✓ Real-time alerts and status updates
- ✓ Service schedules, maintenance logs, and fault alerts in one connected interface
- ✓ Seamless integration with V-MUX powered by DTD and Captium's cloud-based software

All designed to keep apparatus operational, predictable, and ready to respond.

Key Benefits for Fire Departments

See Issues Earlier

Apparatus diagnostics and system alerts surface early warnings, helping you catch problems before they lead to downtime.

Troubleshoot Faster

Clear, essential data supports faster, more confident decision-making when assessing faults of scheduling service.

Reduce Downtime

Centralized, actionable insights help prevent unexpected failures and keeps more apparatus available for response.

Stay Focused on the Fireground

Captium centralizes apparatus health and automates alerts, so crews trust the rig, avoid surprise failures, and stay mission-focused.

Benefits for Apparatus Dealers

Built-in Value for Customers

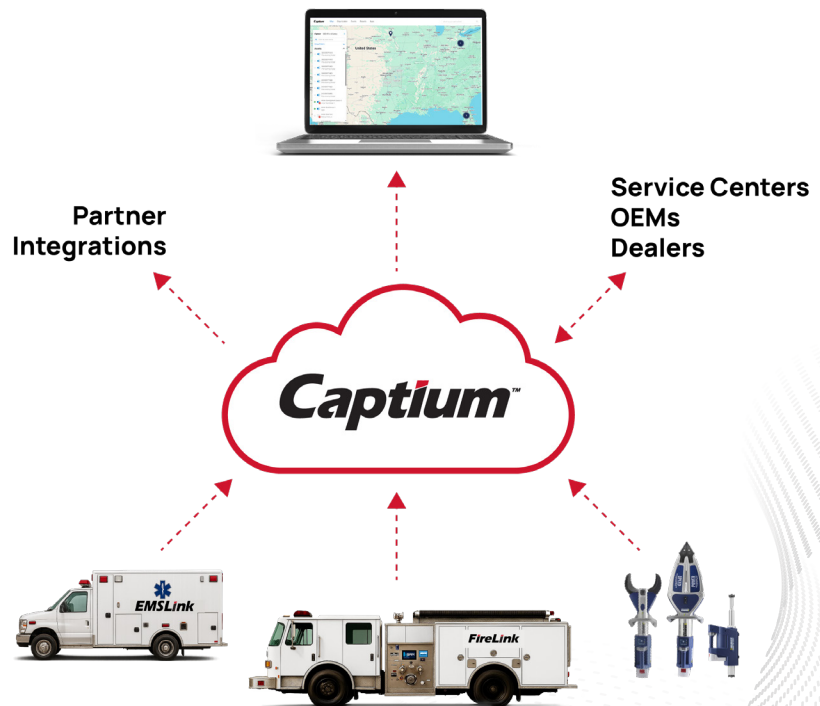

Add connected diagnostics directly into the electrical architecture, enhancing readiness without requiring complex integrations.

Enhance Reliability and Serviceability

Remote visibility into apparatus health enables faster troubleshooting and better-prepared service visits—improving the end-user experience.

Future-Ready Foundation

FireLink is part of the Captium ecosystem, creating a scalable path toward deeper insights, partner integrations, and unified fleet intelligence.

The Captium Advantage

FireLink is part of Captium—the connected platform that turns equipment and apparatus data into insights. By feeding vehicle data into Captium, FireLink gives fleets and service teams a shared view of fleet health, helps catch issues early, and supports faster, better-prepared service.

Know the true condition of every apparatus before the crew steps into the bay.
