

9/26/12

PRODUCT NAME: Pressure Sensor for 9315 Navigator Controllers

AKRON PART NUMBER: New part number 93000060 (Old part number 93000050)

PRODUCT DESCRIPTION:

In an effort to constantly improve Akron Brass products we have updated the pressure sensor used with the Style 9315 Navigator Controllers & 9301 Portable Flow Meters to a new part number. This new sensor was changed to include a molded in connector that connects directly to the wiring harness verses our previous sensor design that had a wire existing the top of the sensor to a connector. Akron Brass is committed to providing a superior product to our customers and this change was made to improve the long term reliability and performance. The old and new sensors are shown below.

This new sensor part number 93000060 includes the pressure sensor and an 8" pigtail harness with a 4-Pin Weatherpack connector.

Please update your records to reflect this part number change only for instances where this part is ordered separately. If the sensor is included with a kit it will automatically be updated to the new number.

LIST PRICE (US Dollars, FOB Wooster, OH USA)
