

Supplemental Warning Light Kit 3200-0000-13

Introducing the next generation in school bus lighting: An auxiliary warning light that provides districts with a must have safety option. Developed with Ohio transportation officials, highway patrol, and school districts to reduce stop arm violations, the kit positions supplemental LED warning lamps at bumper level on the bus (fore and aft) to provide an attention demanding signal that is more perceptible to a distracted motorist than the standard 8 lamp system alone. The system was extensively field tested by districts across Ohio and is accepted by the State Patrol.

Features:

- Supplemental LED lights provide increased safety when loading and unloading students
- Reduces the number of illegal passers
- Lights are active when stop arm is deployed enhancing driver visibility
- Easy to install
- Complement to the national standard for school bus lighting FMVSS-108
- Approved as a safety option by the State of Ohio Highway Patrol
